

AGORA – Release Notes [April 2026]

Dear customer,

At AGORA SecureWare SA, our mission is to provide a highly secure, sovereign and intuitive collaboration environment for your most sensitive information.

With this release, we continue to strengthen the usability and governance capabilities of the AGORA Trust Room, focusing on more transparent collaboration, improved information visibility, and a smoother user experience in your day-to-day work.

As always, many of these enhancements are directly driven by your feedback. Thank you for your continued trust and valuable input.

What’s new in this release

Share document annotations

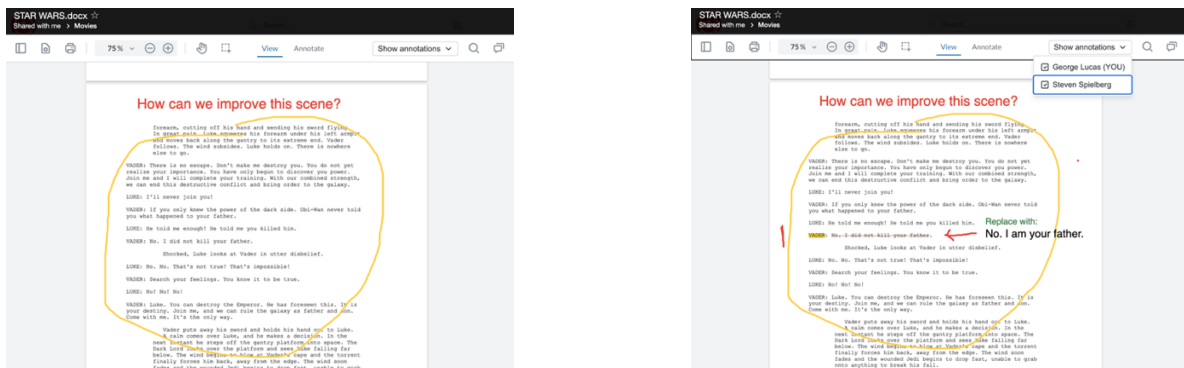

Until now, document annotations (highlighting, underlining, freehand notes) were only visible to the author.

With this release, annotations can now be selectively shared with other authorized users—enabling more precise, contextual collaboration directly within documents.

- Annotations remain **private by default**
- Users can **publish annotations** when they want to share insights
- A new **“Show annotations” filter** allows users to select which annotations to display:

- When you open a document, only your own annotations are shown by default. If others have published annotations, a “Show annotations” dropdown appears, allowing you to select which annotations to display (multiple selections supported):

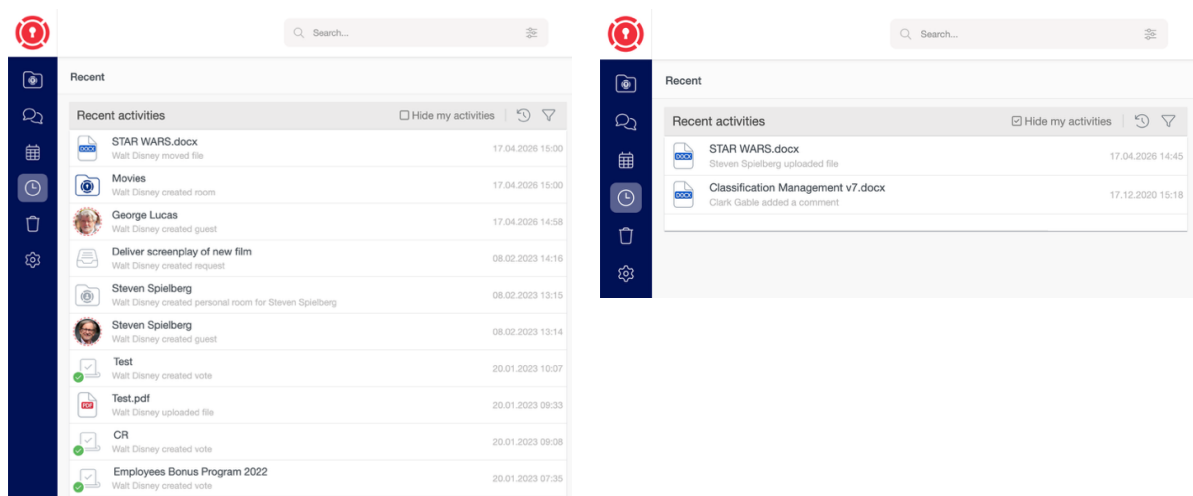

This feature complements comments by enabling **clear, in-context feedback exactly where it matters.**

Recent activities filter

The Recent activities page provides a quick overview of what has been happening in your Trust Room (uploads, newly created resources, and new comments). You can also scroll back through the full history to the creation of the Trust Room.

To improve usability, especially in active environments, we introduced a new filter:

- **“Hide my activities”** allows users to focus on updates from others
- Improves signal-to-noise ratio in highly active collaboration spaces

This enhancement supports **faster navigation and better situational awareness**.

Outlook – What’s next

Looking ahead, we are focusing on further strengthening the AGORA Trust Room along three key dimensions:

- **Governed collaboration: Enhancements to workflows, approvals, and traceability to support more complex and regulated use cases**
- **User experience & efficiency: Continued simplification of core interactions to ensure intuitive adoption across all user groups**
- **Private AI capabilities: Expansion of our secure, self-hosted AI engine to enable intelligent document handling, summarization, and decision support—without compromising data sovereignty**

Our goal remains unchanged: to provide you with a platform that combines **maximum security, full control, and practical usability**.

Thank you for using AGORA.

Kind regards,

AGORA SecureWare SA
