

Dear Customer,

At AGORA SecureWare, we're constantly trying to do our best to provide you with a leading application that responds to your specific needs. For this reason, your feedback is always highly valued to us, so please keep the input coming on feature requests, etc.

In the last days, we deployed an update of our platform, which includes several minor bug fixes and improvements. This update introduces some important features that we hope you will enjoy and find useful!

Votes

We revamped the existing votes functionality: with it, users can express their preferences, by either accepting/rejecting a proposed topic or by choosing between a given set of options.

Furthermore, using the "Circular resolution" vote's type you have now a legally binding (in accordance with the Swiss Code of obligations (Art. 713)) tool for collecting preferences and taking decisions.

AGORA offers following types of vote:

- Pro / Con: users can either approve or reject a given topic
- List of options: users can choose between a given list of options/candidates
- Circular resolution: users can approve or reject a given topic in accordance with the Swiss Code of obligations (Art. 713). This type of vote requires signing.

Release notes-January 2023

Circular resolutions

The outcome of a circular resolution or of a vote with the property "signature" enabled is a PDF document signed by the voters with their decisions. This document is a proof of the authenticity, integrity, and non-repudiation of the voters' decisions.

Editing online

You have now the possibility to edit and create your Office documents online (Word, Excel, and PowerPoint), without having to first download them, edit them locally and upload the new version.

Azure AD integration

AGORA let you now integrate your existing Azure Active Directory. You can either use this integration to let existing AGORA users log in using their Azure credentials (Single Sign-on) or to import into AGORA your Azure accounts. In this latter case the accounts will be managed by Azure.

Compare versions

To spot the differences between two versions of a document, under "Versions" you will now find a new "Compare with previous" function, which will enable you to see the two versions side-by-side with highlighted the performed changes.

PDF	Ticket.pdf 66.2 kB	

One more thing... redacted documents

Sometimes you need to share a document, but you would like to remove some confidential part of it. Here where "redaction" comes in play. Selecting "Upload redacted document" from the "+ New" dropdown, you are able to choose a local PDF file, select and mark for redaction the regions (text, graphics) you would like to remove from the document and, once finished, upload and share the document. All the "redaction" happens locally and therefore the confidential information never leaves your device.

We are currently evaluating this function: if you find it useful and would like to use it, please take contact with us.

Please, also contact us whenever you are interested in one of these functionalities and they are not available to you, or you would like to have more information.

Enjoy secure collaboration on our platform.

Best regards,

AGORA SecureWare
